Newton is famous for having said he can describe gravity, but he won't speculate about its origin. "Hypotheses non fingo" – I will not deal in hypotheses, Isaac Newton wrote in an essay, "General Scholium", which was appended to the second edition of his "Principia". Since Newton, little progress has been made.

Physics (from the Ancient Greek φύσις physis meaning "nature") is the fundamental branch of

science. The primary objects of study are matter and energy. Physics is, in one sense, the oldest and most basic academic pursuit; its discoveries find applications throughout the natural sciences, since matter and energy are the basic constituents of the natural world.

Once we've settled on the thermometric variable to be measured, the next step is to decide on a temperature scale. Not because "units matter" (as every physics teacher says when they subtract points from students who forgot to write them on a test) but rather because temperature has no meaning without values defined as standard.

Discuss effective temperature. No object emits a mathematically perfect blackbody radiation spectrum. There will always be lumps in the curve. Set the area under intensity-wavelength curve for a real source of radiation equal to the area under the intensity-wavelength curve for an ideal blackbody and solve for temperature.
