Energy Flow, Thermodynamics, and Life. Enter Into the Cool, in which the authors claim that the study of thermodynamics (in some ways the neglected stepchild of the sciences) can inform our understanding of biology, ecology and even economics. The authors begin by rephrasing the Second Law—as 'Nature abhors a gradient'—and proceed to illustrate its relevance to large systems in general.

Eric Schneider's and Dorion Sagan's book "Into the Cool" is a profound book in many respects. Its main message is that life is energy-based, more specifically based on energy flow (gradient). Together with genetic inheritance (reproduction) the two make life predictable and expected natural phenomenon.
