Plastic debris at the micro-, and potentially also the nano-scale, are widespread in the environment. Microplastics have accumulated in oceans and sediments worldwide in recent years, with maximum concentrations reaching 100 000 particles m<sup>3</sup>. Due to their small size, microplastics may be ingested by low trophic fauna, with uncertain consequences for the health of the organism.

**The physical impacts of microplastics on marine organisms ...**

Genetically modified food controversies are disputes over the use of foods and other goods derived from genetically modified crops instead of conventional crops, and other uses of genetic engineering in food production. The disputes involve consumers, farmers, biotechnology companies, governmental regulators, non-governmental organizations, and scientists.

**Genetically modified food controversies - Wikipedia**

2 | Page Most of the published studies were "before and after" intervention studies (17/39); a limited number of randomized controlled trials (2/39) was available.

Genetically modified foods (GM foods), also known as genetically engineered foods (GE foods), or bioengineered foods are foods produced from organisms that have had changes introduced into their DNA using the methods of genetic engineering. Genetic engineering techniques allow for the introduction of new traits as well as greater control over traits when compared to previous methods, such as ...
