Graph 1 shows the relationship between change in temperature and the rate of reaction. The trend shows that as the temperature of the HCl increases, so does the rate of reaction. This is a polynomial relationship, which implies that the rate of reaction increases exponentially in relation to the increase in temperature.

What are the rate law and rate constant for this reaction ...

Reversible Reactions: - reactions that can go from the right hand side of the equation (products) to the left hand side of the equation (reactants). Chemical Equilibrium: - the state at which the concentrations of all reactants and products remain constant with time (the Forward Reaction Rate = Reverse Reaction Rate).

Unit 7 Reaction Rates and Equilibrium Notes (answers)

This results in the same number of particles moving about in a smaller volume, which increases the number of collisions and the rate of the reaction. Catalysts. A catalyst is a chemical that speeds up a reaction without being used in it. Catalysts are specific to reactions, so the catalyst for one reaction would not work for another.
