History Technological motivations. The modern widespread use of the FDR is believed to stem from, and be motivated by, the development in technologies that allowed the collection and analysis of a large number of distinct variables in several individuals (e.g., the expression level of each of 10,000 different genes in 100 different persons). By the late 1980s and 1990s, the development of ...

A total of 104 individual subjects who had both DLCO and 6 min walk testing were identified.After discarding data from 7 subjects that were technically invalid (based on  $VA < 90\%$  best VC in all cases), 15 we included data from 97 patients. Their demographic data are shown in Table 1. There were a nearly equal number of men and women, of average age 66 years.

Da die Fläche des j-ten Rechtecks gleich der Klassenhäufigkeit  $n_j$  ist, errechnet sich die Höhe des Rechtecks, die sogenannte Häufigkeitsdichte  $h_j$ , als Quotient  $n_j / d_j$  der Klassenhäufigkeit  $n_j$  durch die Klassenbreite  $d_j$ . Dies wird unmittelbar klar, wenn man sich überlegt, dass die Fläche eines Rechtecks das Produkt aus Breite (Klassenbreite) und Höhe (Häufigkeitsdichte) ist.
