Chapter 16 Evolution of Populations 16-1 Genes and Variation Darwin’s original ideas can now be understood in genetic terms. Beginning with variation, we now know that traits are controlled by genes and that many genes have at least two forms, or alleles. We also know that individuals of all species are heterozygous for many genes.

ANSWERS TO SECTION 16 1 GENES AND VARIATION PAGES 393 396 PDF

A population is a group of individuals of the same species that mate and produce offspring. A gene pool consists of all the genes, including all the different alleles for each gene that are present in a population.. Researchers study gene pools by examining the relative frequency of an allele. The relative frequency of an allele is the number of times a particular allele occurs in a gene pool ...
