*Algebra 2 Linear Piecewise Functions Answers - Thank you for reading algebra 2 linear piecewise functions answers. As you may know, people have look numerous times for their favorite readings like this algebra 2 linear piecewise functions answers, but end up in malicious downloads.*

*Rather than reading a good book with a cup of tea in the afternoon, instead they are facing with some harmful bugs inside their laptop.*

*algebra 2 linear piecewise functions answers is available in our digital library an online access to it is set as public so you can get it instantly.*

*Our books collection saves in multiple countries, allowing you to get the most less latency time to download any of our books like this one.*

*Merely said, the algebra 2 linear piecewise functions answers is universally compatible with any devices to read*

Introduction to piecewise functions. Functions assign outputs to inputs. Some functions have simple rules, like "for every  $x$ , return  $x^2$ ". However, there can be other rules that are more elaborate. For example, "If  $x < 0$ , return  $2x$ , and if  $x \geq 0$ , return  $3x$ ". These are called \*piecewise functions\*, because their rules aren't uniform, but consist of multiple pieces.

If you want to graph a piecewise linear function, graph each function on it's specific interval separately. Bring it all together, and you have your graph! This tutorial shows you the entire process for graphing a piecewise linear function.

Introduction to Piecewise Functions. Note that the point  $(-2,4)$  has a closed circle on it. Technically, it should only belong to the  $2x+8$  function, since that function has the less than or equal sign, but since the point is also on the  $\{x\}^2$  graph, we can just use a closed circle as if it appears on both functions.

Here is an example of how to graph a piece-wise function. Make sure you break the equation up into each separate equation and then use a t-table to find 2 points to graph.

**Algebra 2: Graphing a Piecewise Function**

- Identify the two functions that create the piecewise function.  $4x^2 + 13x + 1 = (x+3)(4x+1)$
- Graph each function separately.
- Identify the break between each function as given by the domain of the piecewise function.
- Use a different color to highlight the piece of the graph that is given by the domain of the piecewise function.

Student One uses 0 for the y-intercept in all of the equations, but does find the slope correctly. However writes the equations in slope intercept form, and uses function notation incorrectly by placing f of x equal to an inequality. Students should realize that  $f(x)$  is equivalent to y. Student Two did not finish.
