It is possible to use a graphing calculator to find the solutions of a quadratic equation. Remember that using the trace key gives an estimate of the solutions. A dancer leaps straight into the air. The quadratic function $y = 16x^2 - 8x$ models the dancer's height above the ground after x seconds.

8-1 Identifying Quadratic Functions As shown in the graphs in Examples 1 and 2, some parabolas open upward and some open downward. Notice that the only difference between the two equations is the value of a . When a quadratic function is written in the form $y = ax^2 + bx + c$, the value of a determines the direction a parabola opens.
