In mathematics, a function was originally the idealization of how a varying quantity depends on another quantity. For example, the position of a planet is a function of time. Historically, the concept was elaborated with the infinitesimal calculus at the end of the 17th century, and, until the 19th century, the functions that were considered were differentiable (that is, they had a high degree ...

Boolean Function. Consider a Boolean algebra of subsets generated by a set S , which is the set of subsets of S that can be obtained by means of a finite number of the set operations union, intersection, and complementation. Then each of the elements of \mathcal{B} is called a Boolean function generated by S (Comtet 1974, p. 185). Each Boolean function has a unique representation (up to order) as a union of ...

Description Multivariable Mathematics combines linear algebra and multivariable calculus in a rigorous approach. The material is integrated to emphasize the role of linearity in all of calculus and the recurring theme of implicit versus explicit that persists in linear algebra and analysis.

INTEGRATION. This tutorial begins with a discussion of antiderivatives, mathematical objects that are closely related to derivatives. After the integral is introduced via the area problem, the integral and the antiderivative are shown to be related by an amazing theorem called the fundamental theorem of calculus.
