*A High Resolution Anatomical Atlas Of The Transcriptome In - When somebody should go to the books stores, search establishment by shop, shelf by shelf, it is really problematic. This is why we provide the books compilations in this website. It will definitely ease you to see guide a high resolution anatomical atlas of the transcriptome in as you such as.*

*By searching the title, publisher, or authors of guide you really want, you can discover them rapidly. In the house, workplace, or perhaps in your method can be all best place within net connections. If you strive for to download and install the a high resolution anatomical atlas of the transcriptome in, it is no question easy then, in the past currently we extend the associate to purchase and create bargains to download and install a high resolution anatomical atlas of the transcriptome in fittingly simple!*

Abstract. This paper reports the availability of a high-resolution atlas of the adult rat. The atlas is composed of 9475 cryosectional images captured in 4600 × 2580 × 24-bit TIFF format, constructed using serial cryosection-milling techniques. Cryosection images were segmented, labelled and reconstructed into three-dimensional (3D)...

This study aims to provide a high-resolution atlas and use it as an anatomical framework to localize the gene expression data for mouse brain on postnatal day 0 (P0). A color Nissl-stained volume with a resolution of 13.3×50×13.3 μm<sup>3</sup> was constructed and co-registered to a standard anatomical space defined by an averaged geometry of C57BL/6J P0 mouse brains.

We identified 1,002 tissue-specific genes that are a source of novel tissue-specific markers for 37 different anatomical structures. The quality and the resolution of the data revealed novel molecular domains for several developing structures, such as the telencephalon, a novel organization for the hypothalamus, and insight on the Wnt network ...

In recent years, high-throughput methods that collect such information at cellular resolution on a gene-by-gene basis have been developed. Of particular relevance was the development of high-throughput technology for RNA in situ hybridization (ISH) to map gene expression patterns on tissue sections [5] - [7] .

The serotonin (5-hydroxytryptamine, 5-HT) system modulates many important brain functions and is critically involved in many neuropsychiatric disorders. Here, we present a high-resolution, multidimensional, in vivo atlas of four of the human brain's 5-HT receptors (5-HT1A, 5-HT1B, 5-HT2A, and 5-HT4) and the 5-HT transporter (5-HTT). The atlas is created from molecular and structural high ...
