Traits are controlled by factors called genes. For each trait listed in Table 1, you get one gene from  
your mother and one gene from your father. For each trait, there is a dominant form and a  
recessive form. The dominant gene masks the effect of the recessive gene for the trait.

Which traits in this investigation showed a blending of genes? What is this "blending" called? One  
example is that of hair type curly was dominant and straight was recessive, but there was a  
medium, or a blending with the heterozygous (hybrid) individual who turned out "wavy" haired.  
Blending is also called "incomplete dominance".
