Today's activity allows students to visualize motion and its correspondence to kinematics graphs while working with someone new. Before we start the activity, I assign partners using the Random Student Generator that already has my students' names loaded. Because this activity does not need to be completed outside of class, I feel comfortable in choosing the pairings for my students.

HS-PS2-1. Analyze data to support the claim that Newton's second law of motion describes the mathematical relationship among the net force on a macroscopic object, its mass, and its acceleration. [Clarification Statement: Examples of data could include tables or graphs of position or velocity as a function of time for objects subject to a net unbalanced force, such as a falling object, an ...

--Students will exhibit a basic understanding of the relationship between Newton's First Law and the working of a roller coaster. Which basically means they should be able explain that an object in motion stays in motion and that is what happens on a roller coaster...once an object is set in motion, it continues in motion.
