Microevolution is the change in allele frequencies that occurs over time within a population. This change is due to four different processes: mutation, selection (natural and artificial), gene flow and genetic drift. This change happens over a relatively short (in evolutionary terms) amount of time compared to the changes termed macroevolution which is where greater differences in the ...

Homo erectus 'to' modern man: evolution or human variability?. by A. W. (Bill) Mehlert. Abstract. An interesting change is taking place in creationist circles in respect of the status of the taxon Homo erectus and its relationship to Homo sapiens sapiens. This development is paralleled by a similar change of direction in evolutionary thinking, and in both cases it seems likely that the ...
