**The Scientific Method with the Simpsons KEY - 630s Science**

The number of dependent variables in an experiment varies, but there can be more than one. Experiments also have controlled variables. Controlled variables are quantities that a scientist wants to remain constant, and she or he must observe them as carefully as the dependent

variables.

**Variables in Your Science Fair Project**

Types of Variables. Control variables are controlled to make sure that the independent variable is the only factor causing a change in the dependent variable. Plant growth is likely affected by fertilizer (making it dependent), but fertilizer application is not affected by plant growth (making it independent).

**Identify the Controls and Variables - BIOLOGY JUNCTION**

A variable in an experiment which is held constant in order to assess the relationship between

multiple variables, is a control variable. [1] [2] A control variable is an element that is not changed throughout an experiment, because its unchanging state allows the relationship between the other variables being tested to be better understood.
