What is absolute zero? | Yahoo Answers

Absolute zero is the lowest limit of the thermodynamic temperature scale, a state at which the enthalpy and entropy of a cooled ideal gas reach their minimum value, taken as 0. The fundamental particles of nature have minimum vibrational motion, retaining only quantum mechanical, zero-point energy-induced particle motion. The theoretical temperature is determined by extrapolating the ideal gas ...

Absolute zero - Wikipedia

absolute zero is attainable, in practice. It is not found in the universe (lowest temperature in deep space is about 3 k). Scientists in the lab have reached almost Absolute zero and are extremely close to reaching it, if they have not already. All Absolute zero means is that the particle has no energy- its not vibrating at all.
