### Algebra Infinite Solutions

The roots of algebra can be traced to the ancient Babylonians, who developed an advanced arithmetical system with which they were able to do calculations in an algorithmic fashion. The Babylonians developed formulas to calculate solutions for problems typically solved today by using linear equations, quadratic equations, and indeterminate linear equations.

We're asked to use the drop-down to form a linear equation with infinitely many solutions. So an equation with infinitely many solutions essentially has the same thing on both sides, no matter what  $x$  you pick. So first, my brain just wants to simplify this left-hand side a little bit and then think ...

This also looks strange because again,  $6x - 6x = 0$ . They cancel out. We are left with  $-12 = -12$ . However, this is a TRUE statement.. Since this is a true statement, there are solutions and this happens to be an infinite number of solutions.. Every point on the line is a solution to the system.

The 19th Century saw an unprecedented increase in the breadth and complexity of mathematical

concepts. Both France and Germany were caught up in the age of revolution which swept Europe in the late 18th Century, but the two countries treated mathematics quite differently.
