Chroma subsampling is the practice of encoding images by implementing less resolution for chroma information than for luma information, taking advantage of the human visual system's lower acuity for color differences than for luminance.. It is used in many video encoding schemes – both analog and digital – and also in JPEG encoding.

Chroma subsampling - Wikipedia

This independently authored paper is obsolete.. Reviewers of this papers have indicated that they believe the paper suffers from a number of significant technical errors and offers poor advice in a number of areas.
