How Are Fossils Made Yahoo

Answers. Best Answer: Basically to make a fossil what must happen is the animal must be buried very deep soon after it dies. After the flesh has rotted away minerals from the surrounding soil will leach in to the cells of the bone and replace them. After the original bone cells themselves rot the minerals will keep the shape of the bones.

How are fossils formed? | Yahoo Answers

Answers. Best Answer: Most fossils form when the hard parts of organisms become buried in layers of sediment, where they decompose so slowly that the rock preserves their shapes as it lithifies around them. However, considering the decomposition of organic remains, it is very unlikely that a fossil will be the actual remains...

How are fossils made? | Yahoo Answers

Answers. Best Answer: How are fossils made Fossils are made when a living thing dies and is buried by mud, silt, volcanic ash, or sand. Fossils could also be frozen in ice, mummified in hot or cold deserts, or preserved in tar. Usually, all of a living thing's soft parts decay, leaving only the hard parts to be buried,...

Best Answer: Fossils are made when a living thing dies and is buried by mud, silt, volcanic ash, or sand. Fossils could also be frozen in ice, mummified in hot or cold deserts, or preserved in tar. Usually, all of a living thing's soft parts decay, leaving only the hard parts to be buried, except when a living thing is frozen or mummified.

how are fossils made ? | Yahoo Answers

The fossils date between 10 and 40 thousand years old. Asphalt is an excellent preservative. Bones, teeth, shells, the exoskeletons of insects, and even some plant seeds have been pulled from the pits. How are fossils formed? Amber- Insects, spiders, and even small lizard have been found, nearly perfectly preserved in amber.

How are fossils formed? | Yahoo Answers

Answers. Best Answer: There are several types of fossils, but the commonest is where the soft tissues are replaced with minerals, which become rock-hard. The cavity that the body makes after entombment functions as the mold in which the "fossil" is actually made. Mineral deposition is usually by water perfusion through rock,...

how are fossils usually formed? | Yahoo Answers

Answers. They are fossil fuels because they were formed from plants and animals that decayed, and then pressure, bacteria, and heat preserved them in the earth's crust for millions of years. Eventually, these decayed plants and animals went through a chemical change and became fossil fuels, such as coal.

How are fossil fuels made from fossils? | Yahoo Answers

Fossilisation. A fossil is the preserved remains or traces of a dead organism. The process by which a fossil is formed is called fossilisation. It's very rare for living things to become fossilised. Usually after most animals die their bodies just rot away and nothing is left behind. However, under certain special conditions, a fossil can form.

How are fossils made? - BBC Bitesize

A team examining a fossil deposit in the Canadian Rockies has determined that the fossil "bonanza" was buried by a rapid, muddy "miracle of preservation." The researchers concluded that the deposit was created by a rapid mud slurry that covered the bodies so completely that whole bodies were petrified.

How Are Fossils Formed? | Answers in Genesis

How are fossils formed?Amber- Insects, spiders, and even small lizard have been found, nearly perfectly preserved in amber.Picture this scenario: A fly lands on a tree branch in an area that is now the Baltic sea. While looking for food it steps in sticky sap that the tree has made to protect itself from fungal infection.

How are Fossils Formed? - fossils-facts-and-finds.com

Best Answer: Coal, petroleum and natural gas are all fossil fuels. They are fossil fuels because they were formed from plants and animals that decayed, and then pressure, bacteria, and heat preserved them in the earth's crust for millions of years. Eventually, these decayed plants and animals went through a ...

How are fossil fuels made from fossils? | Yahoo Answers

There are several different ways fossils are formed. Here we go through the five steps of fossilisation to make a typical 'mould and cast' fossil. An animal dies, its skeleton settles on the sea floor and is buried by sediment. An animal dies and its body sinks to the sea floor. The soft parts of the animal rot away, leaving only its skeleton.

The Learning Zone: What is a fossil?

All the courses I took concerning fossils were taught by professors who firmly believed in evolution. Yet, when it came to the kinds of life we studied, it seemed the actual evidence made it overwhelmingly difficult to believe in evolution and very easy to believe what the Bible says about creation, corruption, catastrophe, and Christ.

How Fast? | Answers in Genesis

Best Answer: Fossils are precious gifts from the geologic past: signs and remains of ancient living things preserved in the Earth's crust. The word has a Latin origin, from fossilis meaning "dug up," and that remains the key attribute of what we label as fossils. Most people, when they think of fossils, picture skeletons of animals or leaves and wood from plants, all turned to stone.

What are fossils? | Yahoo Answers

Best Answer: Well think about what a mold does. Like a cake mold. Its hollow and can be filled in with batter. The batter takes the shape of the cake mold. The same with, say, a shell. Mud or sediment fills in the shell and takes the shape of the shell. The mold fossil is the shape of the inside of the ...
