Checking for Extraneous Solutions

C is extraneous in the RHS (Right Hand Side) of $A \rightarrow B \rightarrow C$. Because, A can determine B ($A \rightarrow B$), B can determine C ($B \rightarrow C$). Hence, A can determine C also (Transitivity rule). Hence, it is inappropriate to repeat or check an attribute many times.

Case 2 (RHS): To find if an attribute A in β is extraneous or not. That is, to test if an attribute of Right Hand Side of a functional dependency is Extraneous or not. Step 1: Find α^+ using the dependencies in F' where $F' = (F - \{\alpha \rightarrow \beta\}) \cup \{\alpha \rightarrow (\beta - A)\}$. Step 2: If α^+ contains A, then A is extraneous.

$t = 1$ or $t = -1$. Again check to see if either solution is extraneous. If $t = 1$ then $(t^2 + 3)^{1/2} = (1^2 + 3)^{1/2} = (4)^{1/2} = 2$ and $2t = 2$ so $t = 1$ is a valid solution. If $t = -1$ then $(t^2 + 3)^{1/2} = ((-1)^2 + 3)^{1/2} = (4)^{1/2} = 2$ but $2t = -2$ and hence $t = -1$ is an extraneous solution.

Solve and check for extraneous solutions - Math Central

Recognize the potential for an extraneous solution. Recall that after isolating the radical on one side of the equation, you then squared both sides to remove the radical sign. This is a necessary step to solving the problem. However, the squaring operation is what creates the extraneous solutions.

How to Solve Radical Equations with Extraneous Solutions ...

Solve and eliminate any extraneous solutions. And what they mean by extraneous solutions are, in the course of solving this rational equation right here, we might get some solutions that if we actually put it into the original problem would give us undefined expressions. And so those solutions are ...

So my teacher wrote in my notes that "always check for extraneous solutions when dealing with absolute value equations and inequalities " But in my book and in the notes we took in class, we only checked extraneous solutions for absolute value equations, you know the one with the $=$ sign. But in the book, it never ask to check for extraneous solutions for any of the absolute value inequalities.

On the left-hand side of this equation, I have a square root. By definition, this is positive. On the right-hand side, I've got a positive number. Since both sides are known positive, squaring won't

introduce extraneous solutions. But I'll check my solution at the end, anyway, because the instructions require it.
