Rotmans Advanced Modern Algebra as first algebra book ,opinions? ... Algebra by Artin is good (but sparse on proofs at times. Lots of exercises on the other hand), and Algebra by Rotman is certainly more advanced but still good. Rotman also touches on some of the subjects being researched today like representation theory.

Hungerford's Algebra and Rotman's Advanced Modern Algebra. I developed the solutions as a preparation for the Ph.D. qualifying exams. With the exception of some parts of chapter 2, most of the solutions have been proof read to some degree. However, mistakes are bound to exist still. My hope is

Algebra I, Fall 2016 Solutions to Problem Set 1 3. Let $\{a_iK; i \in I\}$ be all the distinct left cosets of K in G , and let $\{b_jH; j \in J\}$ be all the left cosets of H in K . We show the $\{a_ib_jH; i \in I, j \in J\}$ are all the distinct left cosets of H in G . First, if $a_ib_jH = a_i'b_j'H$, then $b_j^{-1}a_i^{-1}a_i'b_j'H = H$, so $a_i^{-1}a_i' \in b_jHb_j^{-1} \cap H = H$, so $a_i^{-1}a_i' \in H \cap K = H$. But $a_i^{-1}a_i' \in K$, so $a_i^{-1}a_i' \in H \cap K = H$

Then follow group representations: Wedderburn-Artin theorems, character theory, theorems of Burnside and Frobenius, division rings, Brauer groups, and abelian categories. Advanced linear algebra treats canonical forms for matrices and the structure of modules over PIDs, followed by multilinear algebra.

We believe that the fundamentals of these applications can now be taught at the junior level. This book therefore constitutes a one-year course in modern algebra for those students who have been exposed to some linear algebra. It contains the essentials of a first course in modern algebra

together with a wide variety of applications.
