Section 16-3. VOCABULARY REVIEW. 1. Morphology is the internal and external structure. and appearance of an organism. 2. Geographic isolation is the physical separation of. members of a population. 3. Punctuated equilibrium is a pattern of species. formation in which periods of sudden speciation. are preceded and followed by long periods with. little speciation.

Chapter 15 and 16 Study Guide Answers

Speciation is the formation of a new species from an existing species and can occur in two

phases. Those two phases are change of an existing species, and splitting of an existing species into two or more different species. An example of speciation would be the Galapagos finch - there are different kinds of this species all over the Galapagos archipelago.

is the formation of a new species from an existing species ...

For example, if a plant species with $2n = 6$ produces autopolyploid gametes that are also diploid ($2n = 6$, when they should be $n = 3$), the gametes now have twice as many chromosomes as they should have. These new gametes will be incompatible with the normal gametes produced by this plant species.

Formation of New Species · Biology

404 Chapter 16 1 FOCUS Objectives 16.3.1 Identify the condition necessary for a new species to evolve. 16.3.2 Describe the process of speciation in the Galápagos finches. Vocabulary Preview Introduce students to the Vocabulary terms by explaining that speciation, or the formation of new species, comes about because of one or more types of reproductive isolation: behavioral, geographic, or ...

16-3 process of speciation - Section 163 163 The Process ...

Given the extraordinary diversity of life on the planet there must be mechanisms for speciation: the formation of two species from one original species. Darwin envisioned this process as a branching event and diagrammed the process in the only illustration found in *On the Origin of Species* (Figure 16.3a).
