EXPERIMENT 8 Activity Series (Single Displacement Reactions)

The hypothesis has been proven after the experiment. The activity series were correctly found for the metals Magnesium, Zinc, Lead, and Copper and, the halogens Chlorine, Bromine, and Iodine by performing a series of reactions. This lab has almost a hundred percent accuracy since all the data

found had matched the actual activity series.

During part two I first found the colors of the halogens in the mineral oil and the halide ion. Then once that was found I was able to determine if a reaction took place after using the test tubes again. Based on the results I found, I was able to develop the activity series from the metals given in the lab.
