1984 Summary | GradeSaver

How does LCA work? LCA supposes a simple parametric model and uses observed data to estimate parameter values for the model. The model parameters are: (1) the prevalence of each of C case subpopulations or latent classes (they are called 'latent' because a case's class membership is not directly observed); and (2) conditional response probabilities--i.e., the probabilities, for each ...

Latent Class Analysis Frequently Asked Questions (FAQ)

Spatial Saturation Pulses are based around a spatially selective 90°-pulse that flips magnetization into the transverse plane. Unlike the 90°-excitation pulses used for imaging, these spatial saturation pulses are transmitted at a different carrier frequency and are designed to produce maximal phase dispersion across the saturation band.

Complexes of the element gadolinium (Gd) are the most widely used of all MR contrast agents. Because of its unique electronic structure (described below), Gd is strongly paramagnetic. Paramagnetism is an intrinsic property of certain materials to become temporarily magnetized when placed in an external magnetic field. In fact, Gd is one of only four elements that can be magnetized at room ...

This paper is the first known published reference to the "Sentience Quotient" invented by Robert A. Freitas Jr., which first defined the computational density of sentient matter along a wide spectrum spanning 120 orders of magnitude, as defined by universal physical constants. The concept was first created ca. 1977-78 and was described in Freitas' privately circulated but then unpublished ...

Xenopsychology - Robert Freitas

- No • It is not the result of a decision or ongoing daily effort. Professional mental health organizations, including the American Psychological Association, have issued statements explaining that sexual orientation is not a choice and cannot be changed.. Most people discover (rather than choose) their sexual orientation before or during early adolescence, and before any sexual experience.
