**Algebra Extraneous Solutions**

So the equation has no solution at all!  $x = 1$  is called an EXTRANEIOUS solution, which is really not a solution at all. Example 2: When you multiply through by the LCD and solve the resulting quadratic equation, you get solutions  $x=2$  and  $x=1$ . However when we try to check the solution  $x=2$ , it causes the first and last denominators to become 0 ...

Solve and eliminate any extraneous solutions. And what they mean by extraneous solutions are, in the course of solving this rational equation right here, we might get some solutions that if we actually put it into the original problem would give us undefined expressions. And so those solutions are ...

A solution of a simplified version of an equation that does not satisfy the original equation. Watch out for extraneous solutions when solving equations with a variable in the denominator of a rational expression, with a variable in the argument of a logarithm, or a variable as the radicand in an  $n$ th root when  $n$  is an even number.

So, when we're finding a solution to this, we need to test our solution to make sure it's truly the solution to this first yellow equation here, and not the solution to this up here. If it's a solution to this right-hand side, and not the yellow one, then we would call that an extraneous solution. So, let's see if we can solve this.

Algebra Facts Common Types of Mistakes: Extraneous Solutions: Sometimes a method used to solve an equation gives extraneous solutions - values which arise from the solution method but that are not solutions of the original equation. This can happen when a step in the solution process is not strictly reversible, for example, if both sides of an equation are squared at some point.

In mathematics, an extraneous solution (or spurious solution) is a solution, such as that to an equation, that emerges from the process of solving the problem but is not a valid solution to the problem. A missing solution is a solution that is a valid solution to the problem, but disappeared during the process of solving the problem. Both are frequently the consequence of performing operations ...

Students will then solve radical equations algebraically and compare the graphical and algebraic solutions. Investigation of the two methods of solving may result in a contradiction in the number of solutions, motivating the idea of how extraneous solutions may arise when solving algebraically.
