3."Bash" moderately. Most AIME problems will have a nice solution, but this is not always the case. I recommend you only "bash" if you see a clear path to the solution that will take 20 minutes or less. Coordinates are rarely useful, but there have been a few cases where they have killed a problem. Clues

Solution 2001 AIME II, Problem 9 There are four possible  $2 \times 2$  squares. For a single square, the probability that it's all red is  $\frac{1}{2^4}$ . For two squares, the probability both are red is  $\frac{1}{2^6}$  in the four cases when they're adjacent, and  $\frac{1}{2^7}$  in the two cases when they're diagonally opposite.
