There is a small matter, however, that this automaton accepts strings with leading 0's. Since the problem calls for accepting only those strings that begin with 1, we need an additional state s , the

start state, and an additional "dead state". If, in state s , we see a 1 first, we act like q_0 ; i.e., we go to state q_1 . However, if the first input is 0, we should never accept, so we go to state ...
