1.) Use the simulation to determine the wavelengths of the following colors of light: Red: Orange: Yellow: Green: Blue: Violet: 2.) Using the method you developed in the previous activities, determine the speed of a light wave. Does this speed depend on the frequency of light? Amplitude? Compare this with the 'accepted' value of the speed of light (you may need to go online or elsewhere to find this value).

Waves are very common in nature and are very important to us. Animals and humans explore our environment through light and sound waves. All of our communication devices – such as cell phones, television sets and radios, use waves. Waves are the most important means of transferring energy, including the energy from the Sun to the Earth. This ...
