At sufficiently high flux levels, various bands of electromagnetic radiation have been found to cause deleterious health effects in people. Electromagnetic radiation can be classified into two types: ionizing radiation and non-ionizing radiation, based on the capability of a single photon with more than 10 eV energy to ionize oxygen or break chemical bonds.

#### Electromagnetic radiation and health - Wikipedia

\_Multiple Choice Answers (B) The velocity relationship is given by the formula  $v_1/v_2 = n_2/n_1$ . Since the relative index of refraction is defined to be equal to the ratio  $n_2/n_1$ , we see that  $v_1 = 1.2(v_2)$ .

Compared to closed photobioreactors (), open pond is the cheaper method of large-scale algal biomass production. Open pond production does not necessarily compete for land with existing agricultural crops, since they can be implemented in areas with marginal crop production potential . They also have lower energy input requirement , and regular maintenance and cleaning are easier and therefore ...
