The HEG Air™ Circulation System (ACS) is a hybrid system that has been created over 5 years by Home Efficiency Group by a process of continual refinements. At its heart, the HEG ACS is an overgrown air transfer system, albeit with significant differences, including:

Ducted Air Circulation | HEG : Home Efficiency Group

The system simply takes the warm air from your home and passes it through an advanced filtration membrane which absorbs heats from the warm air and then transfers the heat to the passing air from outside - thereby providing you with warm, fresh, clean air, operating with a heat transfer efficiency of up to 80%.

Home Ventilation - The Air Conditioning Showroom

The most appropriate passive cooling strategies for your home — including orientation, ventilation, windows, shading, insulation and thermal mass — are determined by climate, so first identify your climate zone by reading Design for climate. You can then apply the more detailed advice here and in Passive solar heating.

Passive cooling | YourHome

See Ventilate Your Home for ideas to improve air circulation in your house. A sealed, unused fireplace creates an opportunity for moisture problems. If air doesn't circulate in the fireplace, condensation can accumulate on the walls and soak into the masonry. Make sure some air can flow through the fireplace, but rain cannot enter it.
