Biology - 4.4 Biomes. STUDY. PLAY. biome. complex of terrestrial communities that covers a large area and is characterized by certain soil, climate conditions and assemblages of plants and animals. tolerance. ability to survive and reproduce under conditions that differ from their optimal conditions.

**Biology - 4.4 Biomes Questions and Study Guide | Quizlet ...**

Aquatic biomes include both freshwater and marine environments. There are eight major terrestrial biomes: tropical wet forests, savannas, subtropical deserts, chaparral, temperate grasslands, temperate forests, boreal forests, and Arctic tundra. The same biome can occur in different geographic locations with similar climates.

**44.3: Terrestrial Biomes - Biology LibreTexts**

Key Points. Temperature, as well as the availability of nitrogen and phosphorus, are factors that affect living things in lakes and ponds. When available in large amounts, nitrogen and phosphorus cause potentially-detrimental algal blooms in lakes; nitrogen is also a limiting factor for plant growth in bogs.

3. What is the typical vegetation and typical fauna of the tundra? Tundra has vegetation formed mainly of mosses and lichens. Among fauna, animals with a large amount of fur, such as caribou, musk oxen and polar bears, as well as migratory birds, are found.

**World's Biomes - Biology Questions**

Best Answer: Biomes are formed by a set of geographical and climactic conditions that appear together. The convergent conditions provide for similar groupings of living organisms even if the individual species are different. Grasslands have different kinds of grass and forbs but they have a general appearance we call grassland.
