Chapter 18 Viruses And Bacteria Worksheets - Printable ...

How does a virus replicate itself by using the lytic cycle? During the lytic cycle, the phage first injects its DNA into the cytoplasm of the host cell. Then, the DNA directs the synthesis of new phages. The cell then lyses and releases the new viruses into the environment. These phages then find and infect additional bacterial cells.

Biology Resources - District 279

Section: Viruses Read the passage below. Then answer the questions that follow. Viruses are pathogens—agents that cause disease. Viruses lack the enzymes necessary for metabolism and have no structures to make proteins. Therefore, viruses must rely on living cells for replication. Before a virus can replicate, it must first infect a living cell.

Skills Worksheet Active Reading

Kind of virus that infects bacteria. Lytic Infection. Type of infection in which a virus enters a cell, makes copies of itself, and causes the cell to burst. Lysogenic Infection. Type of infection in which a virus embeds its DNA into the DNA of the host cell and replicated along with the host's cell's DNA.
