Sample answer: The string divides the triangle in two; one of these triangles is right or obtuse because one side of the string must make a right or obtuse angle with the stick. In this triangle, the side opposite the right or obtuse angle is longer than the string and that side is also a side of the triangle.

Inequalities in one triangle In a triangle, we can order the lengths of the legs from shortest to longest if we know what the three angles of the triangle are. There is a nice rule that says, in a triangle, the shortest leg is opposite the smallest angle, the longest leg is opposite the largest angle, and the middle-length leg is opposite the middle-sized angle.
