Algebraic Topology Solutions

Algebraic geometry is a branch of mathematics, classically studying zeros of multivariate polynomials.Modern algebraic geometry is based on the use of abstract algebraic techniques, mainly from commutative algebra, for solving geometrical problems about these sets of zeros.. The fundamental objects of study in algebraic geometry are algebraic varieties, which are geometric manifestations of ...

Algebraic geometry - Wikipedia

Algebraic varieties are the central objects of study in algebraic geometry.Classically, an algebraic variety is defined as the set of solutions of a system of polynomial equations over the real or complex numbers.Modern definitions generalize this concept in several different ways, while attempting to preserve the geometric intuition behind the original definition.

Algebraic Equation -- from Wolfram MathWorld

Algebraic geometry is the study of geometries that come from algebra, in particular, from rings. In classical algebraic geometry, the algebra is the ring of polynomials, and the geometry is the set of zeros of polynomials, called an algebraic variety. For instance, the unit circle is the set of zeros of $x^2+y^2=1$ and is an algebraic variety, as are all of the conic sections.
