Answers to Questions on Finding Inverse Functions
Best Answer: The inverse of any equation is found by switching the place of the variables. y=.75x-5 would be x=.75y-5 which simplified (add 5 to both sides and then multiply both sides by 4/3) is y=(4/3)x+20/3 and yes it is a function

Quiz: Inverse Functions - CliffsNotes Study Guides
In this case, f (x) is a function, but f-1 (x) is not a function. Function #1, f (x) is not a one to one function because it does not pass the horizontal line test . In this case, f (x) is a function and f-1 (x) is also a function. This function passes the horizontal line test so, its inverse will also be a function.

When finding inverse functions, you must remember one thing -- make sure the function is 1-to-1 (that is, it passes the horizontal line test) before you go looking for an inverse. If it is not 1-to-1, it will not have an inverse that is a function.
